

Rain Rider Suit

Motivation

Current raincoats are proved uncomfortable, even dangerous in the raining evening to riders. Our group intends to design a comfortable and safe rain suit for bicycle riders.

Design record graph

IDEA

- Ventilated hole and UNIQLO AIRSIM® HEATTECH® techniques take both air permeability and warmth into account.
- Waterproof and breathable fabric GORE-TEX® keeps the rider's body dry in the rain.
- Individual parts instead of an integral one arms the rider to the teeth.
- Light-reflective material and noticeable color make the rider easily be recognized at night.
- ASICS GEL® on key parts protects the rider's safety in accidents.
- Our full heart design provides the rider with a brand-new experience.
